

Experian is a FTSE 100 company and a global leader providing information solutions in consulting, data analysis, credit scoring, related decision support software and various marketing solutions. Employing over 15,000 people in approximately 40 countries, Experian's vision is for its people, data and technology to become a necessary part of every major consumer economy around the world.

Experian CheetahMail is a leading email marketing and customer intelligence company. Our technology and service is designed for companies that want to increase their brand equity through the acquisition and retention of their customer base. By empowering our customers to send highly targeted and relevant emails to their permission based subscriber list, our clients can leverage the use of the web as a means to cut costs, strengthen relationships and increase ROI.

We are hiring people who want to work on challenging enterprise software development projects and help us build the next generation digital marketing platform. If you have experience managing software development projects then we want to hear from you.

At **Experian Cheetahmail** there are real opportunities for you to shine. We encourage everyone to play a part in growing the company, and expect our staff to challenge the way we do things and put forward new ideas and suggestions. And we invest time and effort in ensuring that staffs have fun, build friendships and enjoy coming to work.

Perl/C Developer

(Cyberjaya, Malaysia)

Responsibilities:

Role Purpose: Work with rapidly expanding team to develop future generation of our high volume best-in-market product. Opportunity for many different types of work including AJAX/web/front-end, transactional database programming, custom C data segmentation engine and proprietary mail transfer agents. Candidate should be interested in high-volume data processing and analytics applications to support cross-channel e-marketing.

The candidate will work closely with a team of 5-7 software engineers to design and develop releasable product enhancements every few months. Candidate will work in our new Malaysian development center.

Major Job Functions

- Works in a single project team consisting of 5-7 software engineers.
- Assesses business problems, system requirements, and the external system design.
- Provides development estimates during design phases.
- Responsible for producing quality code that efficiently implements project goals.
- Responsible for submission and maintenance of code into working product builds.
- Stays abreast of current technology, new technological advances and company standards.

Requirements:

- Bachelor's degree in Computer Science or related technical discipline or equivalent experience. Master's a plus.
- 1+ years of experience in software development.
- 1+ years of experience with object-oriented Perl.
- 1+ years of experience with mod_perl or CGI.
- 1+ years of experience with C.
- 1+ year of experience writing AJAX front-end code.
- 1+ years working with HTML/CSS programmatically.
- familiarity with SVN/SVK or GIT.
- 1+ years of experience with Apache applications.
- Contact with any modern database object mapping technology.
- Comfortable developing within a Unix (Linux) shell using vi or emacs.
- General knowledge of system-level concepts like: fork(), POSIX signals, file systems and memory management.

- Interest in high-volume data processing applications.
- Familiarity with Scrum a plus.
- Strong analytical and problem solving skills.
- Strong oral and written communication skills.
- Good knowledge of software development methodologies.
- Ability to think creatively.
