

Email Validation

Improve your business effectiveness with Experian's Email Validation solution

Reduce bounce rates, improve sender reputation and increase deliverability by validating your email addresses

Improve communication with clients and prospects

In today's world, legitimate email campaigns are in competition with the billions of spam emails issued on a daily basis. To ensure the success of any email campaign, organisations need to do more to improve deliverability and reduce the chances of being filtered out by an ISP or blocked as spam. One of the single most important factors in improving deliverability is ensuring the accuracy of the email data held on your mailing list.

Whether you maintain email addresses for marketing, general customer management in retail/utilities or more compliance and risk focused business operations, you must be able to ensure that the emails you maintain are accurate, well-formed and live; enabling you to maintain contact with your customers and prospects.

The market leading solution from a trusted partner

People often mistype email addresses across the many channels organisations collect information. Accepting mistyped addresses is a lost opportunity to communicate with valuable prospects and customers.

By validating email addresses, organisations can reduce bounce rates, improve sender reputation, increase deliverability, and improve overall email performance. This ultimately leads to a greater return on investment.

Why use Experian Data Quality?

Organisations use Experian Data Quality's email validation to ensure incoming data or contact lists contain only valid email addresses.

Through industry-leading technology with unparalleled speed and accuracy, our email validation solution will ensure you only mail to valid and deliverable email addresses. User-friendly response codes are provided to identify the validity of each email address.

Deployment Options

The email validation service can be utilised in three different ways.

Real-time validation at the point of collection

Experian Data Quality's premium hosted email validation solution increases data quality at the point of collection. Whether you choose to implement on your web forms, at a point of sale, or in a call centre environment, we will help you catch mistyped email addresses and prompt customers to make corrections.

Batch Validation Services

Email lists can be validated on an ad hoc basis depending on your needs or preferences - we will upload your file to a secure FTP to process and provide you with a summary of the results. We can also screen your email list to identify common issues and provide data on the make-up of your file.

Benefits to validating email addresses

Ensuring your list contains valid and deliverable email addresses allows your organisation to better communicate with clients and prospects. Sending email to invalid addresses negatively affects your sender reputation and causes ISPs to filter and block your email.

Using email validation will:

- Ensure your messages reach the intended audience quickly and efficiently
- Improve overall email marketing performance
- Reduce cost and resources needed to correct invalid data
- Maintain sender reputation with ISPs

What types of errors can Experian Data Quality email validation fix?		
Email Entered	Type of Data Error	Email Validated
J pommers @ yahoo.com	Mistyping, including extra spaces	jpommers@yahoo.com
ted_king@yaho.co	Omitted letters	ted_king@yahoo.com
john.doe@sbcglobal.com	Incorrect domains	john.doe@sbcglobal.net

Email Validation

In addition to correction of common errors, our service conducts real-time checks with each ISP, via SMTP, to ensure that the email address is live and active.
